1. Application

This specification applies to color TFT-LCD module, LQ12841.

These specification sheets are the proprietary product of SHARP CORPORATION ("SHARP") and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose in whole or in part, without the express written permission of SHARP.

The device listed in these specification sheets was designed and manufactured for use in general electronic equipment.

In case of using the device for applications such as control and safety equipment for transportation(aircraft, trains, automobiles, etc.),rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.

Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment(trunk lines), nuclear power control equipment and medical or other equipment for life support.

SHARP assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in these specification sheets.

Contact and consult with a SHARP sales representative for any questions about this device.

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit and power supply circuit and a backlight unit. Graphics and texts can be displayed on a $800 \times 3 \times 600$ dots panel with 262,144 colors by supplying 18 bit data signal (6bit/color), four timing signals, +3.3V DC supply voltage for TFT-LCD panel driving and supply voltage for backlight.

The TFT-LCD panel used for this module is a low-reflection and higher-color-saturation type. Therefore, this module is also suitable for the multimedia use. Viewing angle is 6 o'clock direction.

This module is the type of wide viewing angle and high brightness(270cd/m²).

Backlight-driving DC/AC inverter is not built in this module.

3. Mechanical Specifications

Parameter	Specification	Unit
Display size	31 (12.1") Diagonal	cm
Active area	246.0(H)×184.3(V)	mm
Pixel format	800(D)×600(V) (1 pixel=R+G+B dots)	pixel
Pixel pitch	0.3075(D)×0.3075(V)	mm
Pixel configuration	R, G, B vertical stripe	---
Display mode	Normally white	---
Unit outline dimensions *1	290.0(W)×225.0(H)×13.2(D)	mm
Mass	990±40	g
Surface treatment	Anti-glare and hard-coating 3H Haze value = 28 %	---

*1 Note: excluding backlight cables.

Outline dimensions is shown in Fig. 1

Page 688

LB-9730-6

6-2. Backlight driving

The backlight system is an edge-lighting type with double CCFT (Cold Cathode Fluorescent Tube).

The characteristics of single lamp are shown in the following table.

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark
Lamp current	I _L	2.0	6.0	6.5	mA rms	[Note1]
Lamp power consumption	P _L	—	3.3	—	W	[Note2]
Lamp frequency	f _L	20	35	60	KHz	[Note3]
Kick-off voltage	V _s	—	—	1200	V rms	Ta=23°C
		—	—	1400	V rms	Ta=0°C [Note4]
Lamp life time	L _L	—	30000	—	hour	[Note5]

[Note1] Lamp current is measured with current meter for high frequency as shown below.

* 3pin is V_{dcv}

[Note2] At the condition of Y_L = 270 cd/m²

[Note3] Lamp frequency may produce interference with horizontal synchronous frequency, and this may cause beat on the display. Therefore lamp frequency shall be detacted as much as possible from the horizontal synchronous frequency and from the harmonics of horizontal synchronous to avoid interference.

[Note4] The open output voltage of the inverter shall be maintained for more than 1s; otherwise the lamp may not be turned on.

[Note5] a) Since lamp is consumables, the life time written above is referential value and it is not guaranteed in this specification sheet by SHARP.

Lamp life time is defined that it applied either ① or ② under this condition
(Continuous turning on at Ta=23°C, I=6mA rms)

① Brightness becomes 10% of the original value under standard condition.

② Kick-off voltage at Ta=0°C exceeds maximum value, 1400 V rms.

b) In case of operating under lower temp environment, the lamp exhaustion is accelerated and the brightness becomes lower.

(Continuous operating for around 1 month under lower temp condition may reduce the brightness to half of the original brightness.)

In case of such usage under lower temp environment, periodical lamp exchange is recommended.

Note) The performance of the backlight, for example life time or brightness, is much influenced by the characteristics of the DC-AC inverter for the lamp. When you design or order the inverter, please make sure that a poor lighting caused by the mismatch of the backlight and the inverter (miss-lighting, flicker, etc.) never occur. When you confirm it, the module should be operated in the same condition as it is installed in your instrument.

7. Timing Characteristics of input signals

Timing diagrams of input signal are shown in Fig.2-1-3.

7-1. Timing characteristics

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark
Clock	Frequency	T/TC	—	40.0	42.0	MHz
	High time	Tch	5	—	—	ns
	Low time	Tcl	3	—	—	ns
	Duty ratio	Tch/T	40	50	60	%
Data	Setup time	Tds	3	—	—	ns
	Hold time	Tdh	10	—	—	ns
Horizontal sync. signal	Cycle	TH	20.8	26.4	—	μs
			832	1056	—	clock
	Pulse width	THp	2	128	200	clock
Vertical sync. signal	Cycle	TV	628	666	798	line
	Pulse width	TVp	2	4	6	line
Horizontal display period	THd	800	800	800	clock	—
Hsync-Clock phase difference	THc	0	—	Tc-10	ns	—
Hsync-Vsync phase difference	TVh	0	—	TH-THp	ns	—
Vertical data start position	TVs	23	23	23	line	—

Note) In case of lower frequency, the deterioration of display quality, flicker etc., may be occurred.

7-2. Horizontal display position

The horizontal display position is determined by ENAB signal and the input data corresponding to the rising edge of ENAB signal is displayed at the left end of the active area.

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark
Enable signal	Setup time	Tes	5	—	Tc-10	ns
	Pulse width	Tep	2	800	TH-10	clock
Hsync-Enable signal phase difference	THe	58	88	170	clock	—

Note) When ENAB is fixed "Low", the display starts from the data of C88(clock) as shown in Fig.2.

9493612121 1-800-833-9437

Page 814

LB-9730-12

[Note1] Definitions of viewing angle range:

[Note2] Definition of contrast ratio:

The contrast ratio is defined as the following.

$$\text{Contrast Ratio (CR)} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

[Note3] Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

[Note4] This shall be measured at center of the screen.

[Note5] Definition of white uniformity:

- White uniformity is defined as the following with five measurements

(A~E).

$$\phi_w = \frac{\text{Maximum Luminance of five points (brightness)}}{\text{Minimum Luminance of five points (brightness)}}$$

[Note6] In the direction of 6 o'clock, Gray scale reverse occurs.

10. Display Quality

The display quality of the color TFT-LCD module shall be in compliance with the Incoming Inspection Standard.

11. Handling Precautions

- a) Be sure to turn off the power supply when inserting or disconnecting the cable.
- b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
To avoid excessive stress on the circuit board, press the surface of the metal case of LCD module, while inserting the connector.
- c) Since the front polarizer is easily damaged, pay attention to avoid rubbing with something hard or sharp.
- d) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- f) Since the panel is made of glass and refined wires and components, it may break, crack or internal wire breaking if dropped or bumped on hard surface.
Handle with care.
- g) Since CMOS LSI is used in this module, take care of static electricity and injure the human earth when handling.
- h) Observe all other precautionary requirements in handling components.
- i) This module has its circuitry PCBs on the rear side and should be carefully handled in order not to be stressed.
- j) Laminated film is attached to the module surface to prevent it from being scratched . Peel the film off slowly , just before the use, with strict attention to electrostatic charges. Ionized air shall be blown over during the action. Blow off 'dust' on the polarizer by using an ionized nitrogen gun, etc.
- k) The polarizer surface on the panel is treated with Anti-Glare for low reflection. In case of attaching protective board over the LCD. Be careful about the optical interference fringes etc. Which degrades display quality.
- l) Connect GND to 4 places of mounting holes to stabilize against EMI and external noise.
- m) There are high voltage portions on the backlight and very dangerous. Careless touch may lead to electrical shock. When exchange lamps or service. Turn off the power without fail.

12. Packing form

- a) Piling number of cartons : MAX.7
- b) Package quantity in one carton : 10 pcs
- c) Carton size : 433mm(W) × 384mm(H) × 352mm(D)
- d) Total mass of 1 carton filled with full modules : 13 kg

4	High temperature operation test	T _a =50°C 240h
5	Low temperature operation test	T _a =0°C 240h
6	Vibration test (non-operating)	Frequency : 10~37Hz/Vibration width (one side):0.073mm ; 58~500Hz/Gravity:9.8m/s ² Sweep time : 11 minutes Test period : 3 hours (1 hour for each direction of X, Y, Z)
7	Shock test (non-operating)	Max. gravity : 490m/s ² Pulse width : 11ms, half sine wave Direction : ±X, ±Y, ±Z once for each direction.

[Result Evaluation Criteria]

Under the display quality test conditions with normal operation state, there shall be no change which may affect practical display function.

14. Others

1) Lot No. Label:

- 2) Adjusting volume have been set optimally before shipment, so do not change any adjusted value.
If adjusted value is changed, the specification may not be satisfied.
- 3) Disassembling the module can cause permanent damage and should be strictly avoided.
- 4) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.
- 5) If any problem occurs in relation to the description of this specification, it shall be resolved through discussion with spirit of cooperation.
